

Myrio releases new IPTV software

Monday, April 5, 2004

Jeff Baumgartner, CED

Myrio Corp. (<http://www.myrio.com>) has launched version 3.2 of its IP Video Platform. Amino Communications' (<http://www.aminocom.com>) AmiNET110 is the first set-top to be certified for the new software release.

The 3.2 iteration houses elements such as Myrio Interactive, which enables remote access for set-top box settings and performance and provides parental controls, and Myrio TotalManage, a back office application for video-on-demand and pay-per-view transaction reports.
